BODY TREATMENTS

Lipoglaucin™

Cellulite is differentiated based on the type, degree and extension:

Type of cellulite

Oedematous: affection of the blood, venous and lymphatic microcirculation, which causes fluid accumulation, poor oxygenation and nutrition of the area.

Soft: a condition related to either the skin tone, or the muscle tone, or both.

Hard: muscular hyper toning that presses on the fatty tissue, causing an accumulation of fluids and, sometimes, painful to the touch.

Degrees of cellulite

Grade 1: depressions occur when pinching or contracting the muscle.

Grade 2: irregularities are slightly appreciated.

Grade 3 and 4: nodules and macro-nodules are clearly visible, with pain when pressed and vascular changes at different degrees.

Extension: it refers to the affected area

Localised cellulite: it affects a certain area.

Generalised cellulite: it affects different body areas.

The Lipoglaucin treatment is developed to treat cellulite in its different types, degrees and extension, with an exclusive combination of actives that are combined synergistically. Lipoglaucin is both the name of the treatment and the name of the active:

- A peptide that induces lipolysis, the process of activation and elimination of fat.
- Glaucine, which stimulates lipolysis and generates an Ultrasound-like effect. It promotes tension and stimulation of the supporting fibres.
- Extract of leech saliva, highly purifying and draining.

Keywords: shock treatment, for all types and degrees of cellulite; the starting treatment in any body care process.

Modelfit™

In the human body, we can find different types of fat with different features:

BROWN FAT

Wonderful fat, it burns quickly by itself. It is brown, because of the large number of mitochondria it contains.

VISCERAL FAT

The most problematic one, it is located between the organs and the viscera. It is eliminated by means of the diet and exercise.

DEEP WHITE FAT

The fat that covers the entire body. It is a deep fat, which quickly grows to accumulate reserves. Resistant, at times, to diets and exercise, which is why it is known as "the deaf fat".

CELLULITE

Very superficial, it is a fat that tends to accumulate more water and toxins inside.

The **ModelFit** treatment is developed to fight the deep white fat, a fatty tissue that quickly grows in the number of adipocytes, to act as an energy reservoir. The Modelfit treatment, with the active ingredient of the same name, provides a solution for this unmanageable fat. **Model Fit:**

- A complex of planktonic origin, rich in carbohydrates and peptides, which releases adiponectin, to activate the muscles (to burn energy and tone up).
- Exopolysaccharide that blocks the adipocyte to prevent the entrance of more lipids.

Keywords: it reduces the deaf fat, tones up the muscles, moulds and recovers the shape.

Body Sculpture Age 50+

With the passing of the years, the needs in body treatments become more and more demanding: draining, slimming, shaping, firming and fighting the ageing is what body skin needs from a certain age. These needs are marked by the hormonal changes associated with the climacteric.

The active ingredients that make up the Body Sculpture line act globally on the different needs:

Anti-ageing: Cinnamon and Reishi Mushroom, a synergistic antioxidant action that helps the body skin rejuvenate and tighten.

Drainage: Horse Chestnut and Bitter Ginger are actives that help toxins mobilise and eliminate.

Slimming: Fisetin and Frambinone (active ingredients obtained from the strawberry and the raspberry), with powerful lipid-reducing action.

Firming: enriched with growth factors and hyaluronic acid, which promote the formation of smoother tissue.

Keywords: climacteric (menopause, pre- and post-menopause), comprehensive action.

Densefirm

Firming and densifying body treatment. Due to different factors (age, diet, pregnancy, sedentary lifestyle...), both the skin and the muscles lose tone, and flaccidity, sagging and lack of firmness appear. With Densefirm, we stimulate and provide the essential active ingredients to recover the density and tension of the skin:

Phytoestrogens: active ingredients of natural origin (from red clover and pomegranate), which stimulate, at cellular level, the production of supporting proteins.

Collagen and elastin biopeptides: essential amino acids to create good collagen and elastin fibres.

Galactoarabinan: natural active ingredient that hydrates and moisturises, recovering the density and softness of a young skin.

Keywords: Anti-stretch marks, tone up, density.

Mesoter

Meso-concentrates presented in 2 ml glass ampoules. They are formulated to be compatible with any facial and body treatment, and can be used with different devices. Its formulations are based on active ingredients of vegetable origin and are compatible with each other, being able to make different cocktails to customise the treatment.

Spa Line

Cosmetic line developed for the beauty centres, health resorts or spas to make their treatment menus, adapting them to the time, to the client, etc., or by seasons. All the necessary products for the development of a body, facial or comprehensive treatment: cleansing products, massage oils, treatment essences, wraps and finishing creams.
